

Thompson Feeds LED Upgrade by Resourceable

RESOURCEABLE LED LIGHTING LIGHTS UP JOHN THOMPSON & SONS FEEDS

John Thompson & Sons, established in 1870, is the largest multi-species feed mill in Europe. Thompsons was the first mill in the British Isles to be awarded ISO 9002; further awards include the organic IOFGA accreditation and an environmental benefits award for the reduction of CO2 emissions. To ensure that Thompsons remain at the forefront of technology, Resourceable Ltd has been upgrading the lighting throughout the site. The result is a dramatic reduction in the lighting bill and carbon emissions, in addition to a startling improvement in light levels.

Resourceable Ltd guarantees energy savings and specialises in energy efficient lighting, industrial and commercial energy monitoring & reduction, automation and the supply of industrial I.T.

“Customers trust us to design and install the optimum, premium, lighting solution and that’s exactly what we do for our customers,” stated Sean O’Kane of Resourceable.

At a Glance-Intake Floor

Reduction in kWhrs: >90,000 kWhrs/annum
Reduction in Running Costs: >£10,000/annum
Reduction in Carbon: >40 Tonnes of CO2
Project Payback: Under 1 Year
Grant Aid: Secured

Bill Houston, Thompson Feeds

Resourceable carried out a professional LED lighting upgrade which has dramatically improved light levels. We have a safer, more energy efficient working environment; the project was turnkey and the results are outstanding. Highly Recommended!
